WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Built on a flat jig to the frame layout (build plan Figure 4).
Head tube 34 x 2.0, 180 long (30.0 bore). Seat tube 31.8 x 1.2, 280 long. Down tube 31.8 x 0.9. Loop tube 28.6 x 0.9. Both axes 70 deg.
Chainstays 19 x 1.2 steel, 21 each side of center at the BB.
Seat stays 16 x 1.2 steel onto a 16 mm cross bar 25 behind the seat tube, 235 up the seat axis; stays 40 each side of center there.
Mitre every tube to the tube it meets; braze or TIG. Then ream the seat tube to 29.4 and the head tube to 30.0, face the BB shell and cups.
Seat tube top: 2 x 26 slit at the back; M5 stop hole on the left, 7 below the top. Fittings: 12 mm bridge for the rear fender, 4 mm kickstand plate 55 behind the BB, M5 bosses (rack, chainguard).
Check: dropouts 110 apart and level; frame flat on the jig within 1 mm.
