WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Platform 300 x 120: three rails 300 long (center and both sides) and three cross bars 120 long, at both ends and the middle.

Struts: one from each rear corner down to the dropout eyelet (about 300 long); flatten 30 at the end and weld on a 3 mm tab.

Stays: one from each front corner down to the boss on the seat stay (about 120 long), with a 3 mm tab at the end.

Drill each tab 5.5 for an M5 bolt. Weld with the rack in a jig taken off the frame so the tabs land on the eyelets and bosses.

Rating plate across the rear: 'MAX 10 kg', with the rear reflector.

Platform 545 above the ground, level; it clears the fender by 20, and the saddle by at least 20 at the lowest setting.

Check: all four tabs sit flat on their eyelets and bosses unforced.
